

CARGO iQ

New Warehouse Custody Events

Cargo iQ is standardizing the description, planning and performance measurement of custody change between the warehouse and the ramp handler.

Freight out of warehouse custody

- ✓ Export activity
- ✓ Warehouse handler gives custody of freight to ramp handler
- ✓ Planned on: Scheduled Time of Departure (STD)
- ✓ Evaluated on actual time

Freight into warehouse custody

- ✓ Import activity
- ✓ Warehouse handler takes custody of freight from ramp handler
- ✓ Planned on: Scheduled Time of Arrival (STA)
- ✓ Evaluated on actual time

In both scenarios the warehouse handler is expected to communicate details about the event, including its timestamp, to the carrier.
